bryantroncosob@gmail.com

Skills

-
- Go, TypeScript (Node), Python
 - HTML5, CSS3, Tailwind, Templ, Jinja2
 - React, NextJs, Django, HTMX

Experience

Self Employed / Full Stack Developer

November 2025 - PRESENT

Once I learned enough, I started accepting jobs to create websites and demos for complete applications, although I continue learning to develop better frontends and backends, as well as creating projects using Docker, Kubernetes, and GitHub Actions, to understand DevOps.

Electro Car / Electro-mechanical Technician

April 2023 - September 2024, Linares, Chile

I have a professional degree as an electronic systems mechanic. I worked at Electro Car repairing the electrical and electronic systems of vehicles for clients, using a scanner to diagnose problems by reading sensor errors, also using an oscilloscope. Then I would resolve those problems and prepare the vehicle to be delivered to the client. After saving enough money, I decided to change careers to become a software engineer, so I quit and started learning on my own for a year.

Education

Frontend Engineer / Self taught

- Web API's and SSR
- HTML Templates
- Static Sites Generators

Electro-mechanical Technician / Inacap

- Basic Automotive mechanics
- Electric systems
- Diagnose and Repair Electronic Systems
